approved sets
identified interval width
A_0 (incumbent)
A (new model)
$A \cap A_0$
identified
μ_{in}
$A \setminus A_0$
unidentified
$\mu_{out} \le M\mu_{in}$
$A_0 \setminus A$
overlap width $\propto (1-s)$; *right lobe width* $\propto s$
identified interval for DIR$(f, a \mid f_0)$
upper endpoint $1 - \mu_{in}/\mathrm{DI}_0$
(does not depend on M)
